# What to do next?
## Example

Once connected, you can navigate around your MSI filesystem normally and upload files using the command `put`

```
put meetingExample121820.R
```

```
put example_metadata.csv
```

Keep this window open since we will return to it in just a moment.

# What to do next?

**Example**

Now that everything is in place, you can return to your SLURM window and run the script.

```
Rscript meetingExample121820.R
```

That's it! Some output will be printed to your screen, and two new files will be created
